

Agemba

Agemba is a cloud-based solution for managing work in organizations. It provides transparency and accessibility and fosters cross-location collaboration in an intuitive way!

What is Agemba

With the aim of delivering high quality results to the customer, on time and on budget, **Agemba** is a cloud-based workflow tool that helps companies manage complex projects. It's powerful database provides critical data and razor-sharp perspectives, enabling transparency and complete traceability across the organization, ensuring that decisions are made based on facts, not speculation. It's innovative estimation tools provide decision makers with the information they need to budget more accurately and satisfy the customer.

Why use Agemba

In today's rapidly changing and complex world, strategic decisions have to be made quickly, but corporate leadership often has to rely on outdated information that has traveled through long, distorted reporting chains. To make the best-informed decisions without delay, leaders need to see "the real thing", which the Japanese call "gemba". Agemba provides immediate insight into the workings of an organization, its team structures, projects and initiatives - **Agemba** is the real thing.

Who should use Agemba

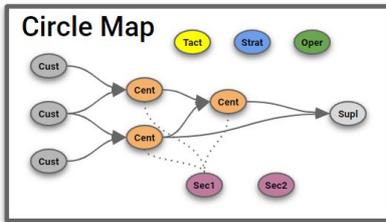

Although Agile Lean patterns are often associated with software development, **Agemba** also supports a wide range of work types including electrical and mechanical engineering, scientific device development, robotics and even large scale transportation and logistics operations.

Agemba delivers
Radical Improvement
through Transparency
and Collaboration

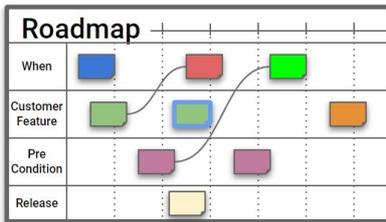

Agemba - Key Features

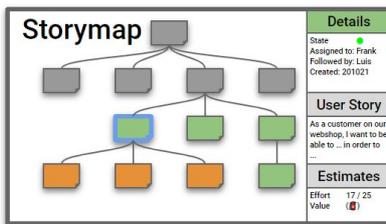

With Agemba - the collaborative workflow tool - each user has a complete and personalized overview of goals, progress and obstacles based on shared information.

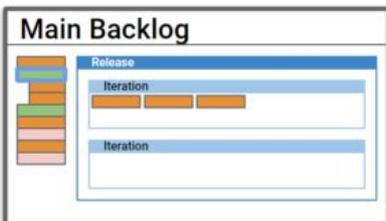

The **Circle Map** is a depiction of the organization, starting with the customer and focusing on the value chain. It describes the relationships between each Circle, clearly identifying points of collaboration and delegation. Each Circle contains detailed information about its members and their roles, along with the Circle's mission and commitments.

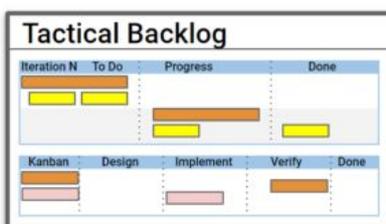

The **Roadmap** and **Outline** views are unique to Agemba providing a common vision of organizational goals, their timelines, and dependencies. The Roadmap offers a high level view of deadlines and status, while the Outline is a more granular, detailed view showing how work is planned within boundaries of time and dependencies.

The **Story Map** is the cornerstone of Agemba, providing a clear visualization of how projects and other deliverables are organized, including cost and complexity factors. Its tree-like structure shows how epics, stories and tasks are connected, giving a powerful overview of assignments and goals. It offers a real time view of status which updates automatically to reflect progress and changes as they occur.

The **Main Backlog** is the planning tool for a specific project or a product. It is the feature that allows for continued prioritization, management and input for a project. Here deliverables can be moved around, broken down and assigned to other people. Equipped with the **Main Backlog**, the **List** view - a dynamic spreadsheet-like display - and integrated estimation tools, the person managing a project or a circle has all he or she needs to get the overview and make prioritizations.

The **Tactical Backlog** is a team's estimated, prioritized task list, broken down into iterations or Kanban flows designed to meet the overall goals of the project most effectively and transparently. Each team member's assignments, commitments and areas of interest are reflected in their individual, customizable **Dashboard** which is also where they receive comments and messages from other collaborators and team members to whom they are accountable.
